## CHAT WITH YOUR DOCUMENTS

### REVOLUTIONISE DOCUMENT INTERACTION WITH AI

Chat with Your Documents is an innovative AI-powered tool that empowers employees to interact conversationally with their organisation's documents and policies. Chatting with reports, strategic documents, research papers, legal documents, or technical manuals saves time. Instead of just reading, you can now dialogue with the content—quicker, simpler, better.

## OFFERS

### AI-BASED CHATBOT

Empower your customer service team with a chatbot to answer incoming questions 24/7.

- ✓ Customisable design
- ✓ Allocate agents based on knowledge
- ✓ Designed for both agents and chatbots

### STEERING DOCUMENTS

Empower your employees with a chatbot that ensures they're on top of their needs.

- ✓ Customisable design
- ✓ Allocate agents based on knowledge
- ✓ Designed for both agents and chatbots

### TENDERS RFI'S & RFP'S

Let AI help you analyse your incoming tenders to respond faster and more efficiently.

- ✓ Build intelligent answers on top of your prior winning tenders
- ✓ Connects to your product, pricing, case studies, etc...
- ✓ Provides you with up to 80% ready answers

### CV MAPPING

Swift, precise consultant-project matching for improved recruitment efficiency and accuracy.

- ✓ Streamlined processes ensure consultants' CVs align with project needs
- ✓ A specialised team is committed to continuously improving the system
- ✓ A track record of successful matches creates precise and effective proposals

# OUTSIDE-IN-VIEW: WHERE DO WE START?

## FOOD FOR THOUGHT

Organisations leverage Data to spark innovation, stay ahead of the competition, and make smarter decisions.

- The need for a robust Data Platform is at the heart of this movement. It serves as an enabler that bridges the gap between current limitations and future aspirations.
- Data and AI are interdependent; one cannot function optimally without the other.
- This symbiosis is crucial for businesses that aim to thrive in a data-driven ecosystem.

## ALTERNATIVE PATHS TO START FROM

Organisations that have decided to become data-driven often start by:

- **Run a Test Pilot (PoC)** with a use case candidate against a well-defined internal source/system(s).
- **Run a 1-day Business Workshop** to unfold initial untapped business potential with AI. This aims to identify relevant and justifiable use case candidates for piloting.
- **Perform a Data Platform Assessment (light) or Pre-Study (deeper)** to identify gaps between the current and desired set-up and propose ways to bridge them (proposal).
- **AI Maturity Assessment** to better understand your readiness for a more data-driven approach. Combined with Organisational, Commercial, Data & Analytics, and Technology readiness.

## RECOMMENDED FIRST PILOT TRIAL

### CHAT WITH YOUR DOCUMENTS

- The fastest way to pilot/PoC a plug-and-play AI solution against your preferred document sets for a specific target group (a Business Area, MARCOM, IT, etc....).
- All prerequisites, dependencies, and any other necessary information will be thoroughly clarified to ensure a smooth and successful pilot phase.
- Training for pilot users.
- Feedback during the trial period to improve and solidify the process support for users.
- **Nexer IP:** Already implemented at 5 clients.

## CONTACT US

Unlock your organisation's full potential with Chat with Your Documents. Transform how your team interacts with vital information, making your processes quicker, simpler, and more efficient.
